OUR PROJECT

- **Users:** young families or young people between 25-35 years
- **Extra rooms:** *bicycle room, storage room, common space for all residents.*
- **Outdoor space:** *Basketball courts, green area for residents, playgrounds for kids.*
- **Number of apartments:** 70 flats
- **Number of buildings:** 6
- **Construction class III:** 10,15 (3 floors)
- **Ratio:** 0,548

Wind pressure on walls **Wind pressure on roof**

The values of c_{pe} are calculated according to Table 7.1, depending on the ratio h/d . These values may be also given by the National Annex.

The values of c_{pi} are calculated according to Chapter 7.2.9. The program is not taking into account the openings in the building.

Wind direction 0 and 180 degrees **Wind direction 90 and -90 degrees**

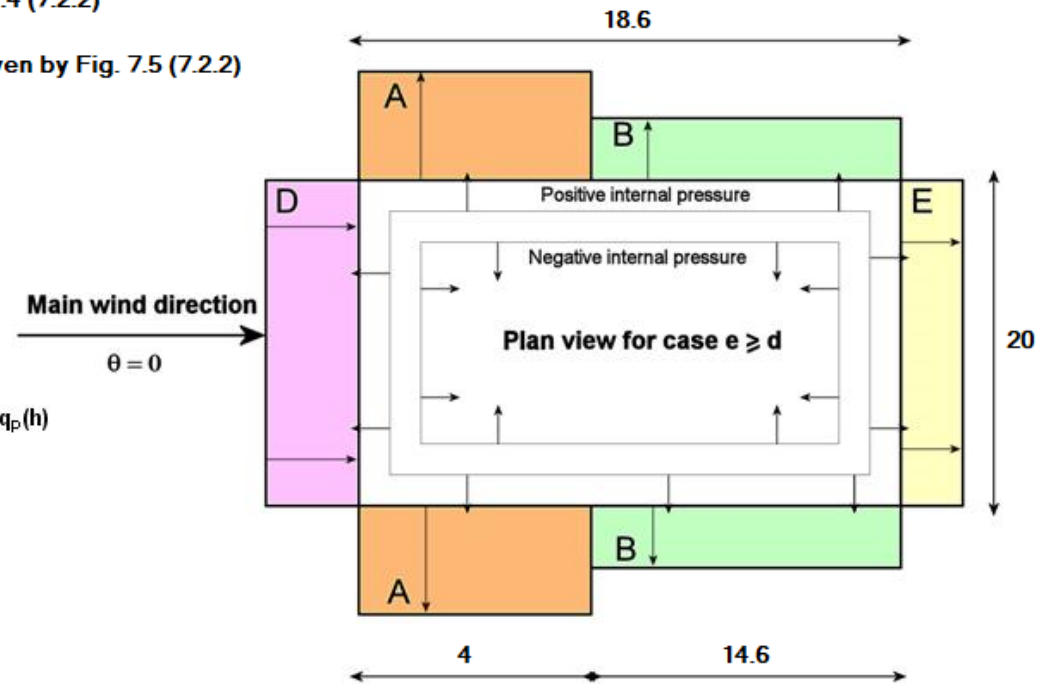

? The wind pressure distribution for windward walls (b direction) is given by Fig. 7.4 (7.2.2)

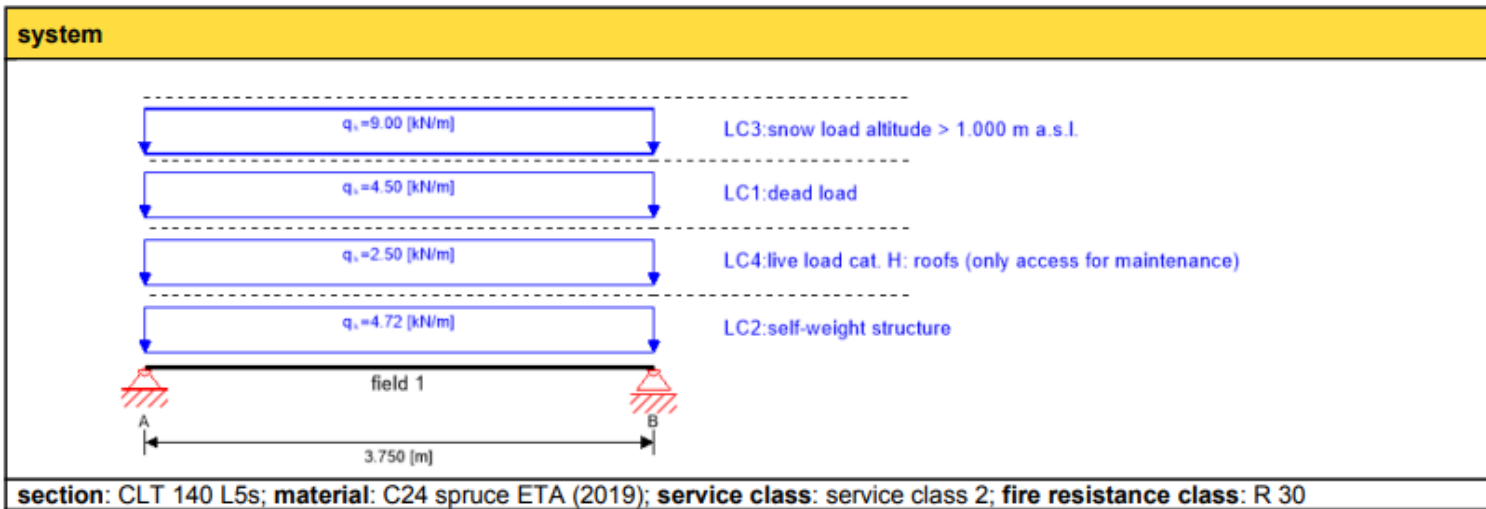

? The wind pressure distribution for leeward wall and sidewalls (b direction) is given by Fig. 7.5 (7.2.2)
